

Ultra & Ultra Multishot Rifle Instructions

IMPORTANT: Please read these instructions and view the CD-ROM before first using your rifle.

NUMBER OF SHOTS (Approx)

	Carbine	Fill Pressure
.177 (12 ft lbs)	35 shots	232 bar
.22 (12 ft lbs)	40 shots	200 bar
.177 FAC	Not available	
.22 FAC 18 ft lbs	30 shots	232 bar

Gun Safety

- Make sure you know the laws relating to airguns, and abide by them.
- When you pick up any gun always check that it is not loaded.
- Never point a gun at anyone or anything that is not a legitimate target.
- Never leave your rifle unattended, even if it's unloaded.
- Gun safety is a state of mind; never rely on a safety catch.
- After use, put your rifle away safely; unloaded and out of reach of children. Store your pellets separately.
- Always ensure it is safe to shoot and be certain of your target before you squeeze the trigger.
- Make sure there is a safe backstop behind your target to catch your pellet in case you miss.
- Beware of ricochets – do not shoot at water or other smooth surfaces that may deflect the pellet in a different direction.
- Always unload your gun when crossing obstacles, taking it indoors or into a car.
- When carrying your rifle, be sure the muzzle is always pointing in a safe direction in case you should stumble.
- Never shoot on land without written permission from the owner.

Safety Warning

- Use only dry breathing air.
- In the interest of safety any physical damage to air cylinders or filling tanks (e.g. dents, rust etc), and their fittings and valves must require the return of the item(s) to the manufacturer or their appointed agent for inspection.
- Any modification or service to the product must only be carried out by the manufacturer or their appointed agent. On no account should owners attempt to work on or modify guns.
- Do not exceed the manufacturers maximum fill pressure for the gun.
- Because of the high pressures involved the air reservoir should be checked periodically by the factory or an appointed agent of the company. BSA recommend a visual inspected every 3 years and pressure tested every 10 years.
- When storing your gun avoid excessive heat, cold or humidity.

Technical Information

All BSA airguns are made to the highest standards at our factory in Birmingham. BSA barrels are cold hammer forged and crowned for optimum accuracy.

Before leaving the factory every airgun is tested on special purpose machinery to verify velocity and pellet grouping. UK law dictates that air rifles should not be capable of above 12 ft-lb of muzzle energy; all BSA models conform to this requirement. Export models are supplied to conform to the laws in the destination country.

Using Compressed Air

CAUTION!

Only dry breathing quality air should be used in guns.
Never fill any gun with oxygen, or any other gas.
Doing so could cause a serious explosion.

Never try to fill your gun with air when the rifle is in a partially assembled state.

The Ultra can be filled from an air tank or using a hand pump. Whichever equipment is used, a pressure gauge and supply hose bleed device must be included, and the manufacturers' instructions must always be followed.

Telescopic Sights

The BSA Ultra has a full length integral 10.8mm dovetailed scope rail designed to accept standard scope mounts and night vision equipment. Refer to the scope manufacturer's instructions on fitting and adjusting.

Filling the rifle with air

The maximum filling pressure for the Ultra and Ultra Multishot are shown in the table above. Do not over charge the rifle as this may be dangerous. Doing so will reduce the power and can damage the rifle.

A filling adaptor is supplied with each rifle; this has a restrictor screw fitted which must be screwed tightly in place when using an air tank to fill the gun, or the rifle could be damaged. If using a hand pump the restrictor screw should be loosened or removed using the Allen key provided

- Before filling, always ensure the gun is unloaded and the safety catch is on.
- Unscrew the end cap from the front of the air reservoir.
- If the air reservoir is empty, cock the rifle
- Insert the filling adaptor into the filling port, and push it home.
- Make sure the bleed screw on the charging unit is closed, and then open the air bottle valve slowly.
- Slowly fill the gun to the maximum recommended charge pressure, and close the valve. Allow a few minutes for the pressure to settle, and then, if needed, top up the pressure in the gun, and close the valve again.
- Quickly open the air bleed valve on the charging unit to allow the air in the hose to escape.
- Pull the filling adaptor from the filling port and replace the end cap.
- Remember that your rifle may be cocked, if it is you should de-cock it immediately for safety reasons.
- To de-cock your rifle, push the cocking knob in and hold firmly, pull trigger and slowly release the knob until it is back in the rest position.

Regularly check the condition of the filling probe "O" rings and apply a little Molycote 111 grease. Only use this grease on the "O" rings as automotive mineral oils and grease can cause an explosion if used with high-pressure air.

Loading the single shot Ultra

- Make sure the safety catch is in the rear (safe) position.
- Push down the probe release catch on the right hand side of the action.
- Place pellet in loading port.
- Push probe forward until the release catch pops up and holds the probe in position.
- To cock the rifle press cocking knob located under the reservoir till you hear a click as the trigger engages. The Ultra has been designed so that it can be cocked easily at the moment you choose to shoot with a minimum of movement that might alert your quarry.
- If you want to de-cock your rifle, push the cocking knob in and hold firmly, pull trigger and slowly release the knob until it is back in the rest position.

Loading the Ultra Multishot

- Apply the safety catch and push the magazine retaining catch forward.
- Push down the probe release catch on the right hand side of the action then remove the magazine from the gun.
- Hold the magazine between finger and thumb with the cover plate screw uppermost. Push a pellet nose first into the first magazine chamber and press down until the pellet skirt is under the cover plate (see Fig 1).
- Rotate the central body of the magazine anti-clockwise until the next vacant position lines up with the hole in the cover plate. Insert another pellet and repeat the procedure until the magazine is full (see Fig 2).
- The red dot on the magazine body will be at the top when all ten pellets are loaded.
- At any stage during loading, the magazine body can be moved back one position by pressing the escapement mechanism lever (see Fig 3).
- Replace the magazine in the rifle (see Fig 4) and push the retaining catch back to lock the magazine in place, push the pellet probe forward until the release catch pops up and take off the safety catch. The rifle is now ready to fire.
- When the tenth and final pellet has been indexed into position, a red spot will appear on the magazine rotor when the probe is withdrawn, push the probe forward and fire the last shot, then remove and reload the magazine.

Note: The magazine is factory filled with lubricating grease. Take care to avoid contamination with dirt or grit and always carry magazines in a sealed plastic bag. Do not take the magazines to pieces, or remove this grease.

checked periodically by a competent gunsmith. You should always have the power of your air rifle re-checked following any maintenance or repair work as any repairs or adjustments could affect the power. It is your legal responsibility to make sure the air rifle remains below the legal limit, which in the UK is 12 ft-lb.

The rifle's air reservoir must always be kept in good condition. If any damage occurs, for example, denting, exposure to extreme temperatures or rust, the gun should be inspected by the manufacturer, or their appointed agent. The internal bore of the air cylinder must be inspected for corrosion periodically; which should not exceed 5 year intervals.

Diagrams and parts lists are available on our website at www.bsaguns.co.uk

2 Year Warranty All new BSA rifles carry a 2 year warranty against faulty parts and labour, this applies to new rifles only and is not transferable; proof of purchase is required. Excluded from this warranty are: failure due to misuse or abuse, the fitting of non-standard parts, and fair wear and tear including damage to the stock. All warranty work must be done by BSA or an authorised agent of the company, and should the rifle be collected or returned under warranty, BSA or their authorised agent reserve the right to charge for postage and / or inspection.

Care and Maintenance

After use, check that your rifle is unloaded and wipe the metal and woodwork surfaces with a lightly oiled cloth. Pay special attention to the metal finishes as these are not fully rustproof and are vulnerable to damp and particularly perspiration. If your rifle has become damp, make sure it is completely dry before you put it away.

If the rifle has been unused for some time the bolt may not release on its own when the probe release catch is depressed, this is because the bolt probe "O" ring is gripping the barrel. If this happens depress the catch and gently ease the probe back. Once free, put a tiny smear of Molycote grease on the "O" ring, and work it back and forth a few times.

Never use oils containing silicone as they can cause damage to metal surfaces. Application of oil and grease except as directed by the manufacturer can often do more harm than good.

Your rifle has been designed and manufactured for optimum performance. Tampering with the components, or unauthorised modifications and alterations may make the rifle unsafe to use and will invalidate the warranty. All air rifles require periodic maintenance and inspection, so even if everything seems to be in good working order, have your air rifle
